About Us

# United we stand

Utopia has two primary objectives:

1. Establish a hub that can meet all conceivable needs.
2. Incorporate the community as an integral part of the project, forming a unified front.

To accomplish these goals, we are fostering organic growth and developing the foundation of our project in collaboration with our community.

Why us

About Us

# Why Choose Utopia?

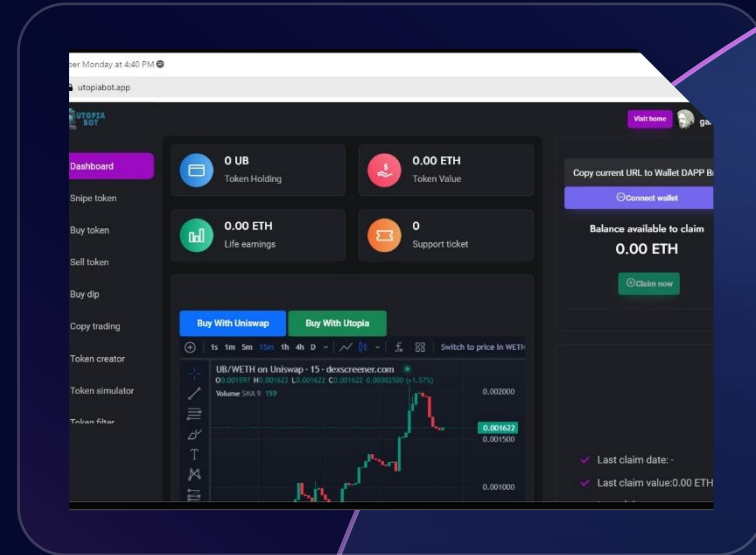

01

We have the determination and the resolve to see this project through.

02

We possess the knowledge and the skills, all that's required is time to *"build for tomorrow"*

Our Focus

# The cohesive force that binds the Utopia Community together.

## Transparency

Establishing trust is the first priority, and this cannot be achieved without providing transparency to both our token holders and the community.

## Building blocks

Our team will serve as the foundational pillars of Utopia, as no tool can offer greater stability than a consistently reliable team.

## Security

Our products will prioritize the highest level of security to ensure that users and investors can confidently utilize our tools.

# Let's Take a Journey Through Time

Sept 2023 ▼

#1

The Start of Utopia  
Live Telegram Sniper

We're launching \$UB with a simple 'Hello' to introduce it and create initial exposure.

Sept 2023 ▼

#2

Community forming  
ORGANIC

Introducing the Utopia Ecosystem to the community and giving a voice to the project.

Oct 2023 ▼

#3

Revenue Distribution to  
holders

Sharing revenue from trading volume to build trust and enable holders to benefit.

Oct 2023 ▼

#4

Simulator & Updates

We are introducing our initial set of tools, including the live Sniper tool available from the launch.

# Meet the team

Our team's mindset leans toward the developer side, and we take pride in crafting tools with our own skills that are not only valued and utilized daily by individuals but also, as project owners, provide us with monetary satisfaction through the recognition and rewards for our work.

# Our Process

## Step 1

The launch of our community token with a focus on organic exposure.

## Step 2

Enhancing user retention and consolidating token holders.

## Step 3

Progress in development and demonstration of our commitment to the community through proof of work.

## Step 6

A consistent growth trajectory in conjunction with the development and adoption of new tools.

## Step 5

Generating revenue through increased trading volume.

## Step 4

Gaining exposure through strategic marketing and forging valuable partnerships.

# Utopia public knowledge

Publicly disclosed collection of DeFi tools.

Currently, the community and investors are aware of approximately 50% of our project's plans. The project takes a unique approach by allowing users to access our ecosystem through various channels, including Web, Telegram, Discord, and Dedicated Mobile Apps, all using a single synchronized account. This approach enhances user-friendliness and accessibility.

Our DeFi Tools include the following:

- Sniper
- Trading Tools (Buy the Dip, Copy Trading, Grid Trading, Buy/Sell Orders)
- Analytic Tools (Simulator, Token Checker, Token Filter with Alerts)
- API (Subscription-based, similar to Etherscan/Bscscan API)
- Deployer (Token Creator, Liquidity Addition & Management System)
- All-in-One DEX (Comprehensive management of project tokens, including Presale/IEO/IDO, Liquidity Addition on our Dex and other Dex platforms, Token/Liquidity Lock, Staking, Airdrops, Contests, and more)
- Chart System
- Integrated Community Chat Platform

These tools represent just a part of our vision, and we are committed to providing a comprehensive and user-oriented DeFi ecosystem.

# Utopia undisclosed

## Private plans and tools to be implemented

Although some of these ideas have been circulating in the community, they were not initially included in the project roadmap. However, it's important to note that these tools and features have been part of our plan from the beginning:

- Marketing Platform for Influencers & Projects
- Token Listings with trending and other monetizable features
- Auto AMA & Updates Listings for projects created within our ecosystem, with dedicated space for hosting AMAs
- Projects Support (both in development and marketing) for individuals with ideas but limited resources to initiate their own projects
- LMS (Learning Management System) - a crucial component to onboard and educate new users joining the crypto space
- P2P (Peer to Peer) Exchange - especially useful for OTC (Over-The-Counter) deals

These additions represent our commitment to offering a comprehensive and user-centered DeFi ecosystem, addressing a broad spectrum of needs and opportunities within the cryptocurrency community.

# Our goal Part I

## One solution for every need

The core concept behind Utopia is straightforward. Currently, there exists a multitude of tools in the cryptocurrency space, developed on various platforms like the web, Telegram, or Discord. However, these tools often require users to either subscribe or hold tokens for access. This results in a decentralized landscape of services that fail to comprehensively address the diverse needs of users.

Utopia aims to present a solution that caters to both users and developers, specifically those with minimal knowledge looking to initiate projects. Our objective is to centralize all these needs under one roof, represented by a single, unified payment currency, \$UB.

While several projects are pursuing similar goals, they often seek to integrate links to existing popular projects and tools rather than developing these tools in-house. Utopia, on the other hand, is committed to crafting and providing its own suite of tools. This decision arises from the recognition that relying on third-party solutions can be risky due to the inherent volatility in the cryptocurrency market, which may lead to projects disappearing without readily available replacement solutions.

# Our goal Part II

## Adapting and staying with the trend

As we are all aware, the cryptocurrency landscape is characterized by its inherent volatility and constant evolution. Consequently, our initial plans may need to adapt to address the most pressing needs of the market.

The ability to swiftly introduce new tools or update existing ones in response to recent changes is paramount for the survival and success of our project.

In summary, our project's overarching goal is to positively influence the cryptocurrency space by offering:

- Stability
- Security
- Education
- Job Opportunities
- User-Centric Tools
- Support for New Projects

These pillars represent our commitment to not only navigate the crypto space but to also shape it for the better.

# Revenue & projections Part I

## First phase – Development, Exposure and Adoption

We are at a point where Development of the Telegram Sniper V1 along with the launch of \$UB token has created Exposure to the projects.

Keep in mind our current exposure was only organic and the User retention (adoption) is very high because we took the time to keep the community informed and we offered transparency at every step.

At this phase revenue generated by the trading volume on \$UB is insignificant and the revenue from the telegram Sniper is 0, taxes are not active.

With the launch of the web interface that will have the Sniper, Buy the Dip and Copy Trading mode we will also update and implement the same modes in the telegram side, this offering the user a first glimpse at the ecosystem.

Once those tools are optimized we can add the fees so it will generate revenue from every user that makes a transaction with our tools.

At this time we should also gain more exposure from the partnerships we will be announcing with other projects.

# Revenue & projections Part II

## Second phase – Marketing and roadmap consolidation

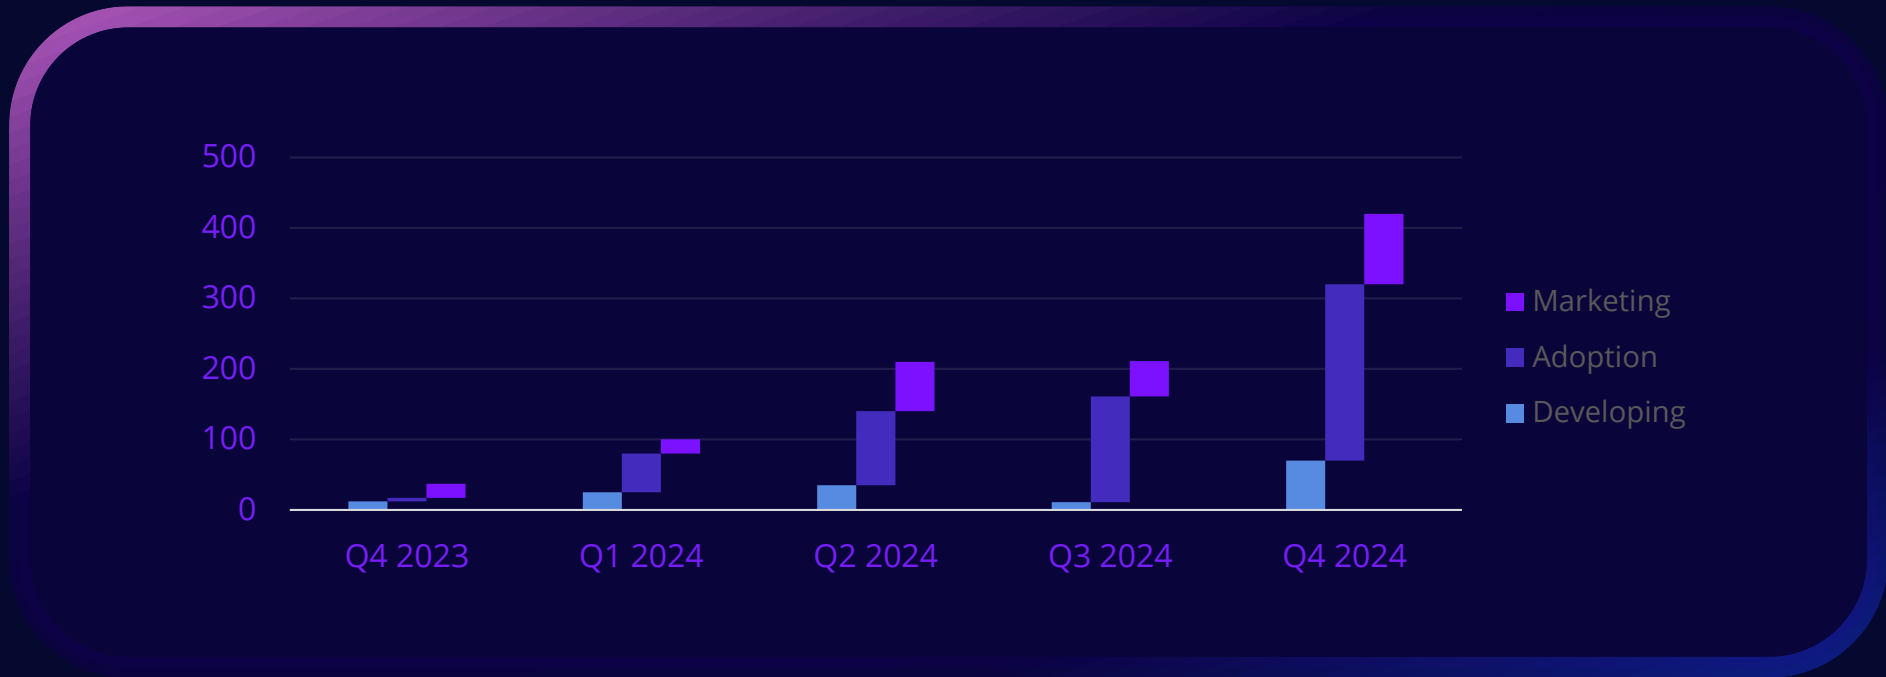

Estimated to commence in December 2023, the second phase will predominantly emphasize marketing and adoption in order to bolster the revenue generated from our existing tools. Simultaneously, our team will be dedicated to advancing the development of the Learning Management System (LMS) and the Decentralized Exchange (DEX) platform.

The pace of our project's progress will be contingent on the funds we generate. This will allow us to better assess our capacity to expand the team and allocate the workload efficiently, ensuring the project's acceleration.

When comparing our project to others in the market that offer solely a Sniper solution, we anticipate initiating daily earnings of 1 ETH by mid-December, and we project an enhancement in the trading volume of the \$UB token due to increased adoption and exposure.

Furthermore, our Christmas Event featuring the Play-to-Earn (P2E) game is expected to attract a surge of new users and a corresponding boost in revenue.

# \$UB Token Chart

With the continued development and adoption of the tools offered by the Utopia Ecosystem, we anticipate a consistent growth trajectory for the \$UB token, potentially reaching a \$500 million market cap by the last quarter of 2024. It's important to note that this estimation is made under the current conditions of a bear market and with the implementation of tools from the second phase. In the event of a bullish market in 2024, our expectations could potentially exceed this estimate by a factor of ten.
